

Environmental Policy

For Grupo Piñero it is very important that our activities are performed within a context of respect for and protection of the environment, since the destinations where we operate hold great environmental and natural riches that we must preserve.

We aim to develop a sustainable model by adapting management to climate challenges, promoting projects aimed at achieving a clean and circular business model that optimally manages natural resources.

Accordingly, we are firmly committed to:

- Comply with local, national and international legislation applicable to our activity.
- Continuously improve our infrastructures to reduce the overall energy consumption of our companies.
- Contribute to the improvement of our carbon footprint, reducing gas emissions from fossil fuels and promoting the use of renewable resources.
- Establish mechanisms to optimize the overall management of water in all our facilities, pursuing the reduction of consumption, the prevention of contamination of water resources and the correct management of wastewater, treating and reusing it appropriately.
- Develop a strategy to manage our waste in integrated fashion, promoting the reduction, reuse and recycling of waste.
- Define and implement, in all the companies that make up the Group, programs that promote the progress and transition to the circular economy.
- Establish a methodology that considers the environmental variable as another key factor in the design process of new products and services and in the company's strategy.
- Plan actions to adequately prevent and control soil, water and air pollution.
- Raise the awareness of our clients, employees and other stakeholders about the main environmental issues and their role in improving the impact of environmental conservation.
- Participate in actions, programs and/or projects for the protection and conservation of local biodiversity in the places where we operate.
- Contribute to the improvement of our carbon footprint, reducing gas emissions from fossil fuels and promoting the use of renewable resources.
- Incorporate environmental criteria in the selection and in our relationship with the different stakeholders.
- Promote a culture of adaptation to best environmental practices among stakeholders.
- Support and promote the commitments acquired in the fight against climate change through different actions and initiatives.
